## National Marine Fisheries Service, Circulars

The major responsibilities of the National Marine Fisheries Service (NMFS) are to monitor and assess the abundance and geographic distribution of fishery resources, to understand and predict fluctuations in the quantity and distribution of these resources, and to establish levels for optimum use of the resources. NMFS is also charged with the development and implementation of policies for managing national fishing grounds, development and enforcement of domestic fisheries regulations, surveillance of foreign fishing off United States coastal waters, and the development and enforcement of international fishery agreements and policies. NMFS also assists the fishing industry through marketing service and economic analysis programs, and mortgage insurance and vessel construction subsidies. It collects, analyzes, and publishes statistics on various phases of the industry.

The NOAA Technical Report NMFS Circular series continues a series that has been in existence since 1941. The Circulars are technical publications of general interest intended to aid conservation and management. Publications that review in considerable detail and at a high technical level certain broad areas of research appear in this series. Technical papers originating in economics studies and from management investigations appear in the Circular series.

NOAA Technical Report NMFS Circulars are available free in limited numbers to governmental agencies, both Federal and State. They are also available in exchange for other scientific and technical publications in the marine sciences. Individual copies may be obtained (unless otherwise noted) from D825, Technical Information Division, Environmental Science Information Center, NOAA, Washington, D.C. 20235. Recent Circulars are:

## ABSTRACT

**The following series of fishery publications of the Bureau of Commercial Fisheries (U.S. Fish and Wildlife Service) and the National Marine Fisheries Service (National Oceanic and Atmospheric Administration) in calendar years 1965-74 are listed numerically and indexed by author and subject: Circular, Current Economic Analysis, Current Fishery Statistics, Data Report, Fishery and Oceanography Translations, Fishery Bulletin, Fishery Facts, Fishery Industrial Research, Fishery Leaflet, Fishery Market Development Series, Foreign Fishery Leaflets, NOAA Technical Memorandum NMFS, Separates, Special Scientific Report—Fisheries, Statistical Digest, and Test Kitchen Series.**

## INTRODUCTION

This index describes the publications of the Bureau of Commercial Fisheries, U.S. Fish and Wildlife Service, issued from 1965 to October 1970, and those of the National Marine Fisheries Service, National Oceanic and Atmospheric Administration, issued from October 1970 through 1974.

In October 1970, the Bureau of Commercial Fisheries was transferred from the Department of Interior to the Department of Commerce and renamed the National Marine Fisheries Service.

The index comprises a list of each publication series in numerical order and alphabetical indexes of authors and subjects.

This index does not include Commercial Fisheries Abstracts (renamed Marine Fisheries Abstracts in 1973) and Sport Fishery Abstracts. These publications have their own indexing systems.

## PUBLICATION DISTRIBUTION

Copies of these publications, when available, may be obtained from D825, Technical Information Division, Environmental Science Information Center, NOAA, Washington, DC 20235.

Most publications are distributed free to libraries that have been designated depository libraries for Government publications; a list of depository libraries may be obtained from the Superintendent of Documents, U.S. Government Printing Office.

## Current Economic Analysis
